

DV 200 Semester 2

Summative Assessment

Frederick Beytell

Introduction

I am Frederick Beytell, a second year UI/UX Design and Interactive Development student. I previously studied Computer Engineering for two years, before making the decision to swap direction to something more creative that allows me to express myself, yet still let me do the problem-solving and coding I enjoy.

Term 2 Project

Exhibito

During Term 2, we were divided into groups and instructed to create a web application using the MERN Stack that allows for online purchase handling, implements user roles and security protocols for secure user validation.

We made a website for arthouse exhibitions, on which arthouses can post about events, standard users can purchase tickets for these events and leave comments and moderators can approve events for listing and remove reported comments.
